

## Individual examination - Data protection act

Study some of the material at the website below (perhaps the 3d link is a good start):

<http://www.datainspektionen.se/in-english/legislation/the-personal-data-act/>

The purpose of this examination is to be aware of the law and how it can affect the database design in different countries. The data protection act is a law in Sweden that you can read about by study the link above.

By study the link you are supposed to summarize the most important aspects of data protection act (300-500 words, references excluded). The deadline is 2:nd december (if we have not decided something else).

A checklist what you need to hand in (make a pdf-file):

- Page with name and personal id.
- 300-500 words reflection about what you find most important in the data protection act according to the design of databases (reference to the material)

Name your file like this:

DPA\_firstname\_secondname.pdf

Subject of the mail should be:

[databases & database design – DPA].

Email to:

[jesper.hakerod@hh.se](mailto:jesper.hakerod@hh.se)

You are expected to bring your reflection at next lecture since you shall discuss it and compare your reflection with two other peers reflections.

Good luck!

Jesper
