

Lab 6A, Securing Layer 2 Switches

Configure SSH on R1 instead of S1. (Switch lanbase image does not support SSH)

Skip NETLAB+ parts.

Try with NMAP instead of Superscan.

Lab 7A, Exploring Encryption Methods

Part 4. Run the program Hide in Picture (found in the application menu) instead of S-tools.

1. Write a secret message to your partner (notepad). Save the message as a txt-file.
2. Use HiP to hide the txt-file in an image. Use Blowfish or Rijndael encryption.
3. Choose a short password. (Do not show it..!)
4. Encrypt the password using the Vigenère Cipher.
5. Have your partner decrypt the password to access the message in the picture.
