Halmstad Colloquium talk February 13, 2014

Professor Hillol Kargupta, University of Maryland, Baltimore, USA

Big Data Analytics for Connected Cars

Abstract:
Next generation of Machine-to-Machine (M2M) networks will be dealing with billions of devices connected over wireless networks. This talk will focus on data analytics for M2M applications. It use connected car environments for illustration and point out why data analytics in M2M offers some unique challenges. Modern vehicles are embedded with varieties of sensors monitoring different functional components of the car and the driver behavior. With vehicles getting connected over wide-area wireless networks, many of these vehicle performance-data along with location and user-behavior information are now accessible to the automotive OEMs and aftermarket vendors. This data offer rich source of information about the vehicle and driver behavior. Once this is combined with other contextual data about the car, environment, location, and the driver, it can offer many new possibilities. Distributed data analytics powered by onboard analysis of data and predictive modeling is changing the face of such vehicle telematics applications for the consumer market, insurance industry, car repair chains and car OEMs. This talk will offer an overview of the market, emerging solutions, and identify some of the unique technical challenges in doing analytics for M2M environments. It will describe how advanced data analysis can help decision making in a connected car environment opening up the scope for innovation.

Brief Bio:
Dr. Hillol Kargupta is a Professor of Computer Science at the University of Maryland, Baltimore County. He is also a co-founder and President of AGNIK, a vehicle performance data analytics company for mobile, distributed, and embedded environments. He received his Ph.D. in Computer Science from University of Illinois at Urbana-Champaign in 1996. His research interests include mobile and distributed data mining. Dr. Kargupta is an IEEE Fellow. He won the IBM Innovation Award in 2008 and a National Science Foundation CAREER award in 2001 for his research on ubiquitous and distributed data mining. He and his team received the 2010 Frost and Sullivan Enabling Technology of the Year Award for the MineFleet vehicle performance data mining product and the IEEE Top-10 Data Mining Case Studies Award. His other awards include the best paper award for the 2003 IEEE International Conference on Data Mining for a paper on privacy-preserving data mining, the 2000 TRW Foundation Award, and the 1997 Los Alamos Award for Outstanding Technical Achievement. His dissertation earned him the 1996 Society for Industrial and Applied Mathematics annual best student paper prize.He has published more than one hundred peer-reviewed articles. His research has been funded by the US National Science Foundation, US Air Force, Department of Homeland Security, NASA and various other organizations. He has co-edited several books. He serve(s/d) as an associate editor of the IEEE Transactions on Knowledge and Data Engineering, IEEE Transactions on Systems, Man, and Cybernetics, Part B and Statistical Analysis and Data Mining Journal. He is/was the Program Co-Chair of 2009 IEEE International Data Mining Conference, General Chair of 2007 NSF Next Generation Data Mining Symposium, Program Co-Chair of 2005 SIAM Data Mining Conference and Associate General Chair of the 2003 ACM SIGKDD Conference, among others.
