

Installing and configuring WinRadius

- Download WinRadius (<http://www.new-saga.com/download/WinRadius.zip>)
- Unzip the file on the Desktop

- Go to the Control Panel (switch to classic view) > Administrative tools > Data Sources (ODBC)
- Under the USER DSN tab click on Add...
- Select Driver do Microsoft Access (*.mdb...)
- In the Data source field type in WinRadius (case sensitive)
- Under Database click Select, navigate to the WinRadius folder on the Desktop and select the WinRadius.mdb file
- Click OK and OK.

- The configuration for WinRadius is now complete.
- Start the program through the WinRadius.exe file in the desktopfolder, make sure it says that WinRadius is running OK.
