Examinators kursanalys

Vilka styrkor har kursen?

The greatest asset of the course is its vibrant social environment. A significant majority of students, approximately 64%, indicated that they found the social study atmosphere to be quite positive. This supportive and interactive setting fosters peer collaboration and engagement, enhancing the overall learning experience

Vilka svagheter har kursen?

The main weakness of the course appears to be its pedagogical structure. In its current form, students view the course as merely a requirement for their thesis rather than recognizing its broader significance. While the course is essential for their thesis work, it is crucial to design it to integrate practical aspects related to the business world, particularly in how the methods are applied in industry settings.

One suggestion is to incorporate video clips instead of relying heavily on lectures. Students could listen to these videos at home and then hold workshops related to each topic. Following this approach, the course could implement hands-on workshops that align with each topic covered in the video content. For instance, workshops could focus on practical applications of qualitative and quantitative research methodologies. These interactive sessions would reinforce the theoretical knowledge gained through the videos and provide students with invaluable opportunities to apply what they've learned in a collaborative environment.

I also believe that participation in these workshops should be part of the grading system, as it is less engaging to see only 10 to 15 students in class out of 70. Additionally, I propose having a quiz after each topic. This could help the students better engage with the course material. These interactive sessions would reinforce the theoretical knowledge gained through the videos and provide students with invaluable opportunities to apply what they've learned. Thus, breaking the course into smaller segments would also be beneficial.

To enhance engagement and appreciation for the material and course as a whole, I suggest incorporating guest lectures from professionals in the business sector. These speakers can highlight the importance of scientific methods in the workplace. By showcasing how these methods are not only relevant for academic research but also valuable for various roles in the industry, students are likely to feel more motivated and connected to the course content.

Furthermore, the analysis indicates that the course literature may need to be revised, as only about 29% of students expressed satisfaction with it. A more practical approach to the course literature could be beneficial. While it should still incorporate foundational concepts related to scientific

I HALMSTAD

methods, it should focus on practical cases that highlight how research methods are applied in both industry settings and academic research. This shift could be valuable for students, as it would help them see the course not just as a prerequisite for their thesis but as one with relevant applications in real-world industry scenarios, particularly if they choose a career outside of academia.
