Examiner's course analysis

Based on the course evaluation result - which are the strengths of the course?

The course was generally very well received. The projects, seminars, and mini exams were appreciated parts of the course that feed into each other in a good way.

Students also liked that the projects were conducted in smaller groups than last year and that the groups were preselected by the teacher with one Erasmus student per group.

Based on the course evaluation result - which are the weaknesses of the course?

This year, the spread of the work load was a bit uneven with some mini exams coming to close to each other. Also for some groups it was hard to find time to do the field work. This was due to a scheduling issue, particular for this year. It will not be a problem next year.

There were a few comments on the content of the guest lectures (too much own research). However since we want to (and have to) present research connected to the course content, we will continue with the guest lectures. I will however, communicate the need to clarify the connection of the lectures to the topic of environmental monitoring to all guest teachers.

Comments about the collaboration with the course ambassadors

We did not work with the course ambassadors. However the course responsible was in constant dialog with the students and also held a feedback session in the end of the course.

Conclusion and suggestions for course development or already made decisions

We will continue the course as before with minor adjustment to distribute work load and give ample times for the different parts of the course.

We are also updating the laboratory to be able to monitor more pollutants than before.
