Number of possible respondents: 28

Answers: 20

Response rate: 71,43 %

Study pace: 100 %

Examiner's course analysis

Based on the course evaluation result - which are the strengths of the course?

The course evaluation results highlight several strengths. Students felt that the course helped deepen their knowledge of scientific articles and enhanced their ability to analyze and evaluate research literature. The course also provided valuable insight into the comprehensive process of conducting a literature review. Many noted that their academic writing skills improved throughout the course. Additionally, the course was described as creative and encouraging of independence and self-reliance.

Based on the course evaluation result - which are the weaknesses of the course?

The course evaluation highlights some weaknesses, including that the time between the opponent session and the presentation was considered too short, making the editing process stressful. More supervision sessions were requested, along with clearer and more consistent instructions regarding submissions and requirements. Additionally, group work was not fully understood by some students, and better explanation of its purpose and contribution to the systematic review process was recommended.

Comments about the collaboration with the course ambassadors

Meetings have been held with the course ambassadors where we analysed the results together and discussed suggestions for course development.

Conclusion and suggestions for course development or already made decisions

Improved introduction on how to conduct a critical review with a clear template for the opponent session. The opponent session will take place earlier in the course to allow more time for revising the text based on feedback. A practical workshop or supervision on how to formulate research questions. Support in academic writing and use of library resources earlier in the course. Regarding the link to sustainable societal development, the course needs to clarify this theme better, including a specific session on sustainability from a sociotechnical perspective, related to digital learning and aspects beyond just environmental issues.
