Examiner's course analysis

Based on the course evaluation result - which are the strengths of the course?

-Continuous Exams and Quizzes: Students appreciated the continuous exams and quizzes for reinforcing learning, providing feedback, and helping them review and understand the course material better. These weekly exams were seen as beneficial for tracking progress and reinforcing learning.

-Labs: The labs were highlighted as relevant and helpful in understanding the course content.

-Quality of Teaching: The quality of teaching was praised, with students noting that the teaching methods and study materials were effective.

-Real-Life Examples: Students enjoyed when the teacher brought in real-life examples, making the lectures more engaging and easier to follow.

Based on the course evaluation result - which are the weaknesses of the course?

-Some students suggested to produce more slides for use in lectures to complement the book.

-Some students expressed concerns about the alignment of exam questions with study material and lab exercises, with some finding the exams unexpectedly challenging.

Comments about the collaboration with the course ambassadors

There was no volunteer to take up the role of ambassador. By contrast, the teacher had small chat with students about all aspects of the course, including the potential improvements.

Conclusion and suggestions for course development or already made decisions

*More slides will be produced but the amount should not be exaggerated, not to act counterproductive to reading the course book. With increased availability of course material in alternative media book, reading has unfortunately been diminishing among students.

*The throughput of the first exam was 66%, which I think shows that exam questions were reasonably well understood. Of course they will be improved further overtime.
