

MX2024 (Vattnets kemi och kretslopp, HT 2022, Halmstad, H0301)

Antal möjliga respondenter: 55

Antal svar: 45

Svarsfrekvens: 81,82 %

Studietakt: 50 %

Examinators kursanalys

Vilka styrkor har kursen?

1. The course layout was generally appreciated, with a mix of content delivery and examination moments suiting different strengths in a very varied class.
2. The project work was seemingly the most preferred part of the course, which was designed to enable freedom of choice on topics as well as practicing with science communication.
3. The level of chemistry which is taught to non-chemists is generally ideal
4. A level of respect between the teachers and students was achieved such that valuable, useful feedback and comments could be shared.
5. The enthusiasm and the abilities of the teaching staff was appreciated.

Vilka svagheter har kursen?

1. The course does not feature a written exam, and so has been perceived as being less stressful, which is good, but also as "easy" by some, which is not good.
2. The language has presented some difficulties, where I have taught in English, but with Swedish materials. The Swedish was perceived to be low quality, and therefore unhelpful.
3. The labs could have been better managed, with some thinking they are too easy and some too difficult. There should be more indication of what should be prepared for before the students attend.
4. the course structure, being designed on a hybrid, "flipped classroom" model - being quite difficult to follow without instruction - was not explained sufficiently and needs to be described a lot more clearly at the beginning.
5. The layout in time - connection between lectures and online tests - was not smooth. Hard to know what to study for each test.

Kommentera samarbetet med kursambassadörerna

1. Communication between teachers should be improved to ensure the topics are covered more seamlessly and without doubt.
2. Project work should have the option of having "teacher formed" groups for those who have not already met the rest of the class during nollning etc.
3. The material, despite odd Swedish sometimes, was easy enough to follow and helpful, and could be even better with more language editing.

Slutsatser samt eventuella förslag till kursutveckling eller beslut som redan fattats

HÖGSKOLAN
I HALMSTAD

1. Improvement of the multiple choice tests. Make them more testing, make them more timely with respect to the lectures, and make them more "important" - limited number of attempts.
2. Significant overhaul of the language in the texts. The material will be reviewed to the best of abilities.
3. Better communication regarding the course structure and layout. Also better instructions about preparing students for labs.
4. Better integration of chemical concepts explore to how they are applied in nature, or in studies on the environment.

Övriga kommentarer

Thank you to all the respondents to the survey and for giving useful comments on what was appreciated and what should be developed in the course. The turnout for the survey was very high, so I understand the comments can be more generally applied, and not designated to a subset of the class. I also commend the polite, constructive nature of the feedback - both positive and negative. This makes it easier to know how to move forward.
