Response rate: 33,33 %

Study pace: 50 %

Examiner's course analysis

Based on the course evaluation result - which are the strengths of the course?

The satisfaction index for the course was really good and most of the students were really satisfied with the course. Especially the laborations are appreciated, and the use of real lab equipment.

Based on the course evaluation result - which are the weaknesses of the course?

Some of the lectures are too theoretical and difficult to understand.

There are also requests to have the text books online in Netacad similar to the CCNA courses and the possibility to use Packet Tracer to be able to practice more on the labs.

Comments about the collaboration with the course ambassadors

We have had continuous dialogues with the students during the course, and that works really good.

Conclusion and suggestions for course development or already made decisions

The lectures could be improved by focusing more on explanations on how the theory is implemented practically.

We will continue to use the text books since they are not offered online on Netacad, and we will encourage the students to practice more in the lab on their own since it is not possible to use Packet Tracer to practice for the content in this course.

Other comments

Other comments in the survey was related to that knowledge of Windows servers, active directory and azure is needed on the job market. That would be great to have a separate course about that, but that is beyond the scope of the course syllabus for this course.
