Examinators kursanalys

Vilka styrkor har kursen?

The course feedback provided by the students suggests that the course has several positive aspects, including the Netacad and examination elements, Yuantaos lectures, the mini-project, and the ability to learn independently. The course material was available from the start, and the questions on the exams were consistent with the content covered in class. Furthermore, the students felt that the course was well-designed for learning, and the teacher provided good support for students who needed help understanding the material.

Vilka svagheter har kursen?

However, some students expressed that they would have preferred the course to be more beginner-friendly, as the mini-project was quite challenging for those without prior knowledge of Linux. Additionally, some students felt that they needed more guidance and support during the project and that it would have been beneficial to work together in groups to learn from one another. Some students also suggested that the lab moments and the exercises could have been more varied. Finally, some of them felt that the timing of the project, practical exam, and written exam was not ideal, as they all occurred one after the other, which made it difficult for them to prepare adequately for all three.

Slutsatser samt eventuella förslag till kursutveckling eller beslut som redan fattats

In summary, while the course received quite positive feedback from the students, there were some areas for improvement, including more interactive and beginner-friendly lectures, more support for group work during the project, and better timing of the different examinations.
