Examinators kursanalys

Vilka styrkor har kursen?

The social study environment received the highest grade. The next highest was the teaching methods for reaching learning goals. From the comments, the lab sessions and the SI sessions were appreciated the most. The next most appreciated aspect was the recorded lectures.

Vilka svagheter har kursen?

The lowest grade was the overall satisfaction from the course. Criticism was given to the laboratory design, the "group work" aspect of the lab report (the work was not evenly distributed), the lecture layout and design was messy and unclear, the lecture order could be changed, the lectures were too heavy with information that it was not possible to learn, no explicit list of what needs to be learnt before an exam; the "ordinarie" exam was not exactly like previous exams, so it was perceived to be difficult.

Kommentera samarbetet med kursambassadörerna

A meeting will be held with the course ambassadors during the weeks following the course. Their comments will of course be taken into account for course development.

Slutsatser samt eventuella förslag till kursutveckling eller beslut som redan fattats

The labs will be reviewed. Some experiments are not as reliable as others. The students also point out the missed opportunity for developing skills in Excel through the collection of datasets from different groups and running basic statistical analyses. I am looking into different methods for examining the labs – while I think the presentation/group discussion is a decent way of examination, it can be better developed for connecting back to the lectured/coursebook material.

The lectures can be looked at again. There is a lot of material taken up in the course, I agree with that, but I do not agree that it is "too much". It might be as easy as restructuring the sequence of lectures (as recommended) or by restructuring the material delivered during specific lectures. There was a perception that only surface-level understanding of biochemical concepts would be examined, and I will do better to make sure this misconception is removed.

Recruitment for SI-leaders for next year has already begun, so we will ensure that next years students get the (much appreciated) help from them!

I remark that recorded lectures are appreciated, and I am willing to continue recording, but I am looking into measures for ensuring they are used only for students who attended the lecture in the first place (or who are ill/otherwise indisposed). Attendance to lectures was OK (approx. 50%), attendance to exercise classes was very poor (5-10%), and this is a concern and a priority.

Övriga kommentarer

Thank you to all who responded to the survey, your input is much appreciated and provides a basis for course development. Response rate of 51% is approved, and an overall satisfaction index of 82% is also approved.

Some of the feedback seems to have been intended for a course which was run at the same time, so I don't know for sure if all the comments and feedback were wholly relevant. A reminder therefore for students to check they are giving feedback on the correct course.

Jag är sammantaget nöjd med kursen.
