

IK4062 (Introduction to Front-End Programming, VT 2026, Halmstad, E3111, V3111, X3111)

Number of possible respondents: 42

Answers: 15

Response rate: 35,71 %

Study pace: 50 %

Examiner's course analysis

Based on the course evaluation result - which are the strengths of the course?

The course shows its main strengths in the social learning environment and the examination design. Students generally experienced a supportive (and positive) study atmosphere (76%), and most felt they had fair opportunities to demonstrate their knowledge during assessments (72%). Overall satisfaction is moderately positive (considering that the number of respondents is only 15 of 42 students), suggesting that many students had a good experience. Moreover, the workload appears manageable (with most students reporting that the time required was equal to or less than the expected study pace).

Based on the course evaluation result - which are the weaknesses of the course?

Based on the evaluation results, there are issues with teaching methods and learning materials. Moreover, nearly half of the respondents reported spending less time than expected, suggesting that the course may lack sufficient depth or challenge. The relatively low response rate (15 out of 42 students) also limits the reliability of the results.

Conclusion and suggestions for course development or already made decisions

Overall, the course is functioning at an acceptable level but needs improvement, particularly in its course design. Future development should focus on improving teaching methods (e.g., more group supervision meetings), aligning course content more clearly with learning outcomes, and increasing the level of engagement and challenge. At the same time, the strong social environment and well-functioning assessment methods should be maintained.
