Examiner's course analysis

Based on the course evaluation result - which are the strengths of the course?

According to the feedback - good level of lectures and matching lab tasks.

Based on the course evaluation result - which are the weaknesses of the course?

With two invited lectures on REST APIs and not treating the topic in depth in the regular lectures it seems some sort of imbalance was created.

Comments about the collaboration with the course ambassadors

The course did not have ambassadors this year (due to lack of volunteers).

Conclusion and suggestions for course development or already made decisions

The REST API part of the course should be reviewed before the next instance.

Other comments

There were also two comments about grading and the exam. 1. Grading - that there should be in person grading for labs - there was, and the students actually attending the sessions did go this route. 2. Answers to sample exams - the approach is not to provide them, this is explained in detail at the beginning of the course, and the approach actually shows its value in the exam results.

In any case, I would like to thank all the participating students for the valuable feedback!

Wojciech
