Number of possible respondents: 38

Answers: 10

Response rate: 26,32 %

Study pace: 25 %

Examiner's course analysis

Based on the course evaluation result - which are the strengths of the course?

The students seem to appreciate the practical tools offered in the course, getting an overview of the various perspectives on innovation and sustainability, including critical aspects and the course material. They also appear to have appreciated the structure of the course, even though this was not reflected in the index related to the design of the course. What stands out in the index is the examinations, which the students seem to be fittingly related to the learning outcomes. The course workload also seems to be reflected in the time that the students spent on the course.

Based on the course evaluation result - which are the weaknesses of the course?

Although we have reduced the number of scientific articles and complemented or replaced them with more accessible material, such as video lectures, compared to the previous year, the student seems to still struggle with digesting the articles. Some students also indicated that they spent more time than the course study pace. They also call for more practically oriented material, both related to content and to examination.

Comments about the collaboration with the course ambassadors

The course is 100% asynchronous, so the course ambassadors' approach was not utilized.

Conclusion and suggestions for course development or already made decisions

Overall, we perceive that many students are content with the course and appreciate both the course content, the topics, and the forms for examination. Even though we have previously addressed the fact that students indicate a high workload and assessed the amount of time required to digest the course material, this challenge persists. As a result, we will look into how we can reduce the workload once more, this time focusing on how we use scientific articles. We will also work towards incorporating more practical examples of theories and concepts, both in the content and examination. However, we want to uphold the course's intentions of providing a balance between conceptual insights into the field and practical guidance, so we will review the syllabus to ensure that it reflects this and sets appropriate expectations for students.
