Examinators kursanalys

Vilka styrkor har kursen?

The overall satisfaction grade was at 78% which means that, generally, the course was appreciated. The highest strength was in the social study environment (86%) meaning the students perceived that the environment was conducive to encourage learning. The main strength was that the teacher was appreciated for being knowledgeable and enthusiastic. The second most common was the course structure being based around (well-formed) lectures and exercise classes.

Vilka svagheter har kursen?

The course structure received the lowest grade (69%), although I remark that this is a small percentile decrease compared to other characteristics. The open-text answers were a little more varied, but considerably more specific: The lab sessions received most criticism, where better structure, organisation and instructions should be introduced. Next the course content was questioned, where many concepts were perceived as unnecessary, and "necessary" concepts were not given more time, exercise questions did not always resemble exam questions, and the teachers approach to discussing multifaceted methodology and ideas was not always on point.

Kommentera samarbetet med kursambassadörerna

The course ambassadors and I met halfway through. Small details were addressed, but nothing which would contribute to a long-term development of the course.

Slutsatser samt eventuella förslag till kursutveckling eller beslut som redan fattats

I have since had a better understanding of the progression through the program, looking at how the concepts discussed early in the program are carried through in different courses. This reflects on the comments around course content, where I am now in a better position to adjust where focus in lectures and the coursebook is made. I intend to reconsider lectured content before next year. I'd like to emphasise that this is not a small, easy task.

The lab compendium was recently restructured, and designed with "live lectures" corresponding to each lab session. My feeling is that this was unsuccessful, where the prelab activities were "told" instead of "worked out". A further development of the lab compendium to enable better preparation and undertaking of lab activities would be a reasonable target before HT23.

Övriga kommentarer

The response rate was 57%, which means it is possible to gain genuine insight into how the students perceived the course. There was also generally consensus around strengths and weaknesses (with exception to the course structure) which gives more clarity/objectivity for developing the course.
