Conclusion and suggestions for course development or already made decisions

Examinor has suggested to program director and coming examiner to update the syllabus. It might be necessary to adjust in program/in other courses to make the update useful.

Other comments

The group has been very quite during the course period both through discussions and when commenting content and methods. We also find that very few students were present in the lectures especially during the last part of the course.

It is always hard to grasp the most important parts in an evaluation when only half of the students have responded and we therefore encourage the students to participate in the course evaluations. There is some concerning comments on overlap or saying different things maybe there is reminding things that was not solved during the session "questions before the exam". The latter session was very constructive and productive this year as many students participated and asked questions. We liked that! There is also some students mentioning that it is difficult to navigate in the Black board page. Examinor doesn't agree but there are many parts and several teachers and if you don't show up on the introduction or ask questions it might be difficult to find the information needed.

This is the third time the course is given and the 4 professors teaching the course feel that is time to adjust the course syllabus. We think the course is too broad and the teachers responsible for the program should consider if it should maintain its main core which is quite technical and natural science based or go for a more systematic/overall sustainable water management outlook.
