Examiner's course analysis

Based on the course evaluation result - which are the strengths of the course?

An oral evaluation was made at the end of the course and the course seems to have gone well. The written evaluation with only five answers is though a bit hard to draw conclusions from, but the result was once again good judging from this and the oral evaluation. The set-up seems to have proceeded well with some improvement suggestions highlighted below. The theoretical summary was deemed good since it provided good possibilities to make an individual design. It was found very positive with the discussions and the students have been overall good in preparing the lectures (the appr 50 % that showed up). Likewise, the supervision has been very useful to understand unclarities with the project.

Based on the course evaluation result - which are the weaknesses of the course?

There were not many weaknesses raised, however some suggestions for development (which highlights some weaknesses in the course). The students raised that there is much work with another project in the parallel course.

Comments about the collaboration with the course ambassadors

The dialogue has worked well and no special needs have been raised.

Conclusion and suggestions for course development or already made decisions

The instructions for theoretical summary can be improved in terms of number and approved sources as well as what material that belongs to which session/seminar. Another point raised from students was that they want more application on construction. They understood that the basics of logistics must be improved. A solution to this is to shorten the general start and give more attention to construction logistics.

In addition, the design of the theoretical summary will change for next year, not by request from the students but from the course-responsible, with a writing task followed by group-wise discussion about the content (orally), to provide better insight to how the students have worked with the assignment. This is also a direct effect from using tools like chat-gpt, a tool which however is supported by the course responsible. However, it is also needed to assess the level of the student in relation to the written summary.

The comments on the project work were overall good, but for next time, the project can have more wide-spread demands, like designing a luxury-area, a cheap area and something in between). It can also be different types of projects like semi-detached houses, apartment buildings etc. overall, the students also ask for study-visits.
