Examiner's course analysis

Based on the course evaluation result - which are the strengths of the course?

Students especially appreciated the designer-in-residence week, during which they worked with a seasoned international guest practitioner from the industry on their class projects, receiving critique, feedback, ideas, and practical advice.

The variety of methods and techniques explored was also highlighted as one of the strengths of the course, together with class-wide discussions of how the various parts of a design process come together, the design sprints, feedback sessions, and the way lectures were delivered to clearly bridge theory with hands-on project work.

All indicators from the survey were generally very positive, with the lowest (75) being the coupling between activities and ILOs. See weaknesses.

Based on the course evaluation result - which are the weaknesses of the course?

The major points made in class and in the evaluation were about devoting more time in the course to examples of practical design work in respect to constraints management, and the need for even more hands-on workshops.

Students also lamented the shorter duration of the course, due to the Christmas and New Year's weeks, which made project work seem rushed.

Comments about the collaboration with the course ambassadors

-

Conclusion and suggestions for course development or already made decisions

Design sprints were formalized as the course was running to have students spend more time in multiple, short-burst, hands-on design activities. These activities are being implemented in the other courses through an iterative process and will be revised to be standardized across the curriculum
