Examiner's course analysis

Based on the course evaluation result - which are the strengths of the course?

Overall, students were very satisfied with the course, reflected by satisfaction index of 92 %. Highest grades were reached for the ability of students to show that they achieved the learning outcomes and the study environment. Students specifically highlighted the excursions, the teacher and form of teaching as well as being able to learn a new statistical program and the study environment.

Based on the course evaluation result - which are the weaknesses of the course?

It has been suggested that an additional opportunity to practice statistical analyses would be good as well as more detailed information at some parts of the course and minor changes for one of the assignments.

Comments about the collaboration with the course ambassadors

Course ambassadors were elected but there was no need for exchange during the course, such as the teacher was not asked for this. There was direct exchange between the students and the teacher at excursions as well as before and after lectures, where the students could ask questions and book meetings with the teacher for further explanations. Also, an extra meeting for specific questions about statistics was conducted upon request of the students.

Conclusion and suggestions for course development or already made decisions

Overall, the course was a good success. We will follow the students' recommendation and provide the demanded information as well as change requirements for the assignment. We will further consider how to build in an additional possibility for practicing statistics into the next year's course.
